## Permeable Paving Colours

This document aims to introduce the wide range of possible Pebble Pave permeable paving colours we can supply and install.

The colours presented are by no means the limit of what we can do. Up to four aggregates can go into each mix. See the final page on custom mixes for more information.

### How to choose an aggregate colour

We use a wide range of aggregate colours, and ultimately the choice is up to you. However we do recommend the final use of the pavement is taken into consideration.

For “heavy” traffic areas such as car parks or large driveways, a darker colour should be used to hide the expected dirt and grime.

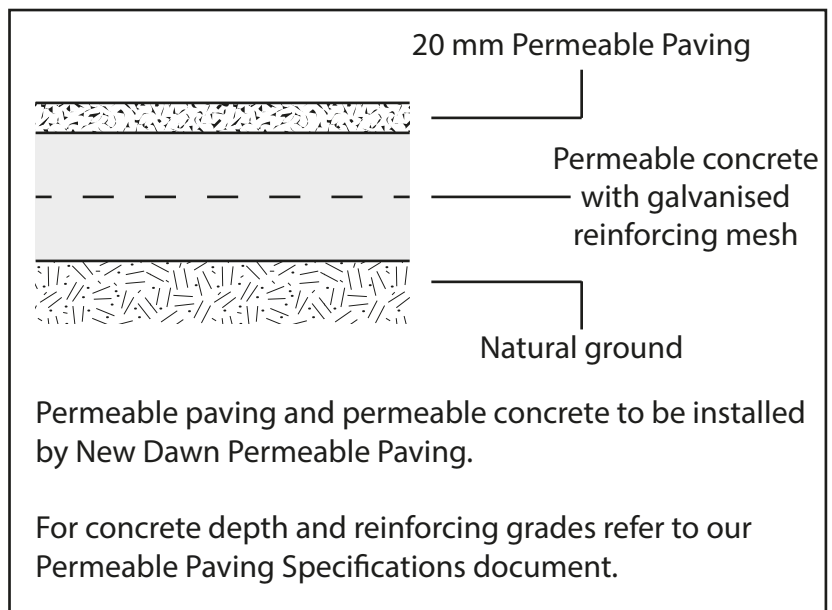

Darker colours will also absorb more warmth from the sun, so around poolsides and in sunny outdoor living areas, lighter colours should be used.

### Aggregate Sizes

Both large (-6/+3 mm) and small (-3/+1.6 mm) aggregates are used. We customise the ratios depending on the pavement use.

For around poolsides, we recommend using a higher ratio of small aggregate to make the paving smoother underfoot. This does not effect permeability or slip resistance.

### How to specify permeable paving

### Slip Resistance

Pebble Pave permeable paving is rated P5 non-slip under Wet Pendulum Testing as per AS 4586:2013(A).

## Midnight

The cornerstone of our dark colours, Midnight gives a dark, stunning driveway.

The black base makes it suitable for very high traffic applications, helping to hide the dirt of heavy use.

Midnight works extremely well both with designs based on neutral colours, and as a simple contrast to more colourful palettes.

## Midnight Gold

A warmer version of Midnight, the inclusion of golden brown aggregate makes Midnight Gold an excellent choice in landscapes featuring outdoor timber accents.

Again, the black base helps hide dirt, making Midnight Gold suitable for very highly trafficked areas.

## Silver Ash

Silver Ash is our most popular mid-grey, and is 100% Victorian crushed granite.

Whilst appearing as a lighter colour, the darker flecks through the aggregate help hide dirt and grime, making Silver Ash appropriate for heavy use areas.

As a neutral grey, Silver Ash is appropriate in landscapes featuring both neutral and colourful palettes.

## Glacier

Glacier is a light- to mid-grey with flecks of white.

The light, neutral tones of Glacier make for a clean, crisp paving surface.

Glacier is suitable for driveways, however lighter colours can show dirt more. For heavy traffic areas, consider Silver Ash or a custom mix.

## Autumn

Autumn is a mid-grey base with flecks of yellow and black

Perfect for a driveway, as the darker base helps hide the usual dirt expected for a regularly trafficked surface.

Pair with light yellows or timbers with a lighter grain such as Stringybark or Silver Top Ash.

## Aztec

Aztec is a mid-grey base with earthy golden brown.

This subtle combination of colours makes for a very natural looking permeable surface.

The dark mottled tones make Aztec suitable for heavy traffic areas.

Aztec is an excellent choice for bush settings or in native-style gardens.

## Sahara

Sahara is a light grey with flecks of yellow and cream throughout. With a grey base, Sahara is a great choice for lighter coloured driveways.

As a light colour, Sahara will remain cooler underfoot during hot Australian summers. Pair with timber or other natural stone such as light granites or travertines.

## K-Blue

A darker grey, K-Blue is an aggregate similar in colour to a dark bluestone.

As a darker grey, K-Blue is a great option for heavier use areas such as driveways, car parks and streetscapes.

## Seashell

Seashell is a blend of yellows with little to no greys or whites.

As a lighter colour, Seashell is an excellent choice for pool surrounds as it will remain cooler in the summer sun.

Seashell looks fantastic when paired with sandstone or travertine blocks, pavers and coping tiles.

## Sunset Gold

If you're after yellow, then Sunset Gold is what you need!

The brightest of our yellows, Sunset Gold makes for a paving surface reminiscent of golden beaches.

It can also be used in custom blends to provide a strong yellow accent.

## Green Granite

A natural Australian Green Granite, this aggregate is a subtle green that forms a highly durable interlocked surface.

Green Granite is suitable for projects such as maintenance-free nature strips and conforms with VicRoads' standards.

## Green Marble

A more intense green, this naturally coloured Green Marble gives a vivid dark green paving surface.

This Green matches the deep green of well maintained grass, and can help car parking blend into public park spaces.

## Custom Mixes

We know that getting the right colour can often be difficult. That's why we offer custom mixes at no extra cost.

Up to four aggregates can be combined in a mix, making for a near-infinite range of possibilities. If you can think of a natural stone colour, we can get it or match it.

We can also match most colours of exposed aggregate concrete.
